DYC Windows & Doors

Efficient Vinyl Windows

Durable Maintenance Free Custom Made

Series 5000

Premium Vinyl Makes the Difference

Don Young Company vinyl windows are formulated to be more impact resistant to hail damage and last longer in harsh southern climates. The two ingredients that affect impact and longevity of vinyl are plasticizers and Titanium Dioxide (TiO^2). We choose to use higher concentrations of these costly ingredients to dramatically enhance the life of our vinyl windows. With these additional costs, the advantages are great for the homeowner.

Don Young Company first started using this higher quality vinyl compound blend in 2003 to fight the extreme summer heat and damaging UV rays. The ***5000 series*** vinyl window represents an excellent value with a proven formulated vinyl that stands up to our Texas climates.

Key Features

- Triple layer LoE^3 with a non conductive spacer for exceptional performance.
- Tilt in sash for simple cleaning
- Interlocking meeting rail for added forced entry protection
- Constant force balances for easy, smooth sash operations

Easy open, long lasting, stainless steel balance system.

- Weather-stripping with added synthetic double fin barrier to better seal out air, pollen, and noise; made with antimicrobial fiber that's resilient to mold and mildew.
- 3/4" Double strength insulating glass for greater efficiency and improved sound reduction.
- Mildew resistant screen
- Multi-chamber design for increased thermal performance and strength
- Lifetime warranty

SUNshield®

Stronger Vinyl Windows

The photo below shows aluminum reinforcement used inside the vinyl cavities where it's most needed in order to properly support heavy glass and prevent sagging.

An additional aluminum reinforcement is used in the sash to securely fasten window locks. These hidden reinforcements are one of the reasons our vinyl windows are stronger than most window manufacturers.
